

We prepare **WATERSHED LEADERS OF TOMORROW**

After-School All-Stars Philadelphia & Camden's

Watershed Education Program utilizes hands-on instructions and activities to help students explore and engage with basic environmental concepts and equip them with skills that will last a lifetime- not only for themselves, but the world in which they live. Students will engage in interactive activities in topics ranging from "what is water?" to watersheds and the organisms that live in them and the career paths that interact with a watershed. Through our program, students will gain a holistic exposure to and appreciation for their environment.

Drinking Water Treatment Plant

This is how most of us know water. The cleaned water travels through pipes to homes and businesses in the community. We use this water to drink, take showers, and everything else we do everyday that involves water. Sometimes, before the water is delivered to us, it is stored in water towers or tanks.

Water Distribution

Water is pumped back to source. This could be the original source, or one of the other rivers we get our water from.
